

DIAMOND BLOCK PATTERN – WALNUT FC RANDOM PLANKS (FACE MATCHING)

Random planks of Walnut FC are arranged in a diamond pattern to create a rectangular block, which is then divided into quadrants. The veneer leaves are positioned at a 45-degree angle to the quadrant lines, with the grain forming V-shaped patterns along these lines. This configuration produces a diamond shape defined by the grain's direction. The blocks measure 18" by 24" and are stitched together to form 8' or 10' sheets.
